

WARRANTY CERTIFICATE

SYSTEM UNI_COVER

Validity

This guarantee certificate is valid for 10 years, starting from the date shown on the transport documents of the products to which it applies.

Scope of application

This warranty certificate applies to:

- products made with painted aluminium profiles, relating to the window and door systems in the catalogue; the guarantee refers to the absence of corrosion phenomena due to exposure of the products to atmospheric conditions, determined by the intended use and the reasonably foreseeable use of the products with the same profiles.
- metal and plastic accessories present in the uni_cover technical catalogues; the guarantee refers to the absence of mechanical breakages of the accessories due to exposure of the products to normal stress conditions, determined by the intended use and the reasonably foreseeable use of the products with the same accessories.
- gaskets, relating to the window and door systems present in the catalogue; the guarantee refers to the absence of wear and tear and effects of wear of the gaskets due to exposure of the products to normal atmospheric conditions and stress, determined by the intended use and the reasonably foreseeable use of the products with the same gaskets.

Foreseeable or reasonably foreseeable use means: (i) the normal operating conditions of the windows and doors, subject to atmospheric events other than extraordinary events or natural disasters, in conditions of assembly and installation carried out in accordance with the rules of the art in accordance with what is indicated in the uni_cover technical manuals drawn up by Uniform S.p.A.; (ii) the use of the windows and doors by the end user in accordance with the use and maintenance instructions manual provided to the customer.

Operations

The warranty offered covers defects exclusively specified in the scope of application.

Exclusions

This warranty certificate is invalidated by any tampering or damage to the integrity of the products due to repairs, inappropriate use and violent actions (burglary attempts, etc.). The lack of ordinary maintenance and the lack of cleaning of the products are also considered invalid (see the uni_cover Use and Maintenance Manual). With specific reference to plastic accessories and gaskets, damage caused by chemical substances (cleaning products, paints, etc.) not provided for in the uni_cover Use and Maintenance Manual are excluded from the warranty.

All installations carried out at a distance of less than 500 m from the sea and/or in environments with high exposure to UV rays (above 2000 m above sea level or in regions where solar radiation exceeds the values recorded in Europe) are excluded from the validity of this warranty certificate. In such circumstances, a possible ten-year warranty of the products may be made available after verification by Uniform S.p.A. of the place of installation and the technical choices made.

The validity of this guarantee certificate does not apply to any damage caused by humidity generated by construction site and related activities, such as plastering, painting, drying of castings, etc., or by the presence of industrial activities such as galvanic, chemical, etc.

Defects resulting from deposits, contacts, splashes, presence in the atmosphere of building materials or chemical substances such as cement, mortar, plaster, lime, etc. are excluded.

All uses not foreseen in the Uniform S.p.A. uni_cover technical manuals or uses involving the use of products not supplied by Uniform S.p.A. are excluded from the validity of this certificate (for example, the use of clips for fixing panels in materials other than aluminium or with methods not foreseen in the catalogue, or the external use of products intended for internal use, etc.).

Uniform S.p.A. cannot be held responsible for damages generated in such circumstances.

Furthermore, all defects that are not specifically listed in the "Scope of application" paragraph, such as loss of gloss and/or colour change, are excluded.
